

IMPCO® HI-Q™ Fine Screen

The HI-Q™ Fine Screen provides efficient and economical shive and dirt removal from a pulp stream under varied operating conditions in all kinds of screening systems. The HI-Q Fine Screen capitalizes on the advances in fine slot screen-plate technology. The innovative Stingray™ Rotor makes it possible to operate at any accepts consistencies up to 4% on softwood and 5% on hardwood, while utilizing 0.2 mm (0.008") and 0.15 mm (0.006") or smaller slotted screenplates.

Key Benefits

- Stingray Rotor promotes the highest screening efficiency possible
- Minimum maintenance
- Stability of operation and low specific power consumption

GL&V Pulp and Paper Group

Albia • Bagley & Sewall • Beloit-Jones • Beloit-Lenox • Black Clawson-Kennedy • Canron • Celleco •
Dorr-Oliver • Downingtown • Hedemora • Impco • LaValley • National Refiner Plate • Sandy Hill

- The bearing assembly is interchangeable with the HI-Q™ Knotters, Rejects Separators and Trash Screens

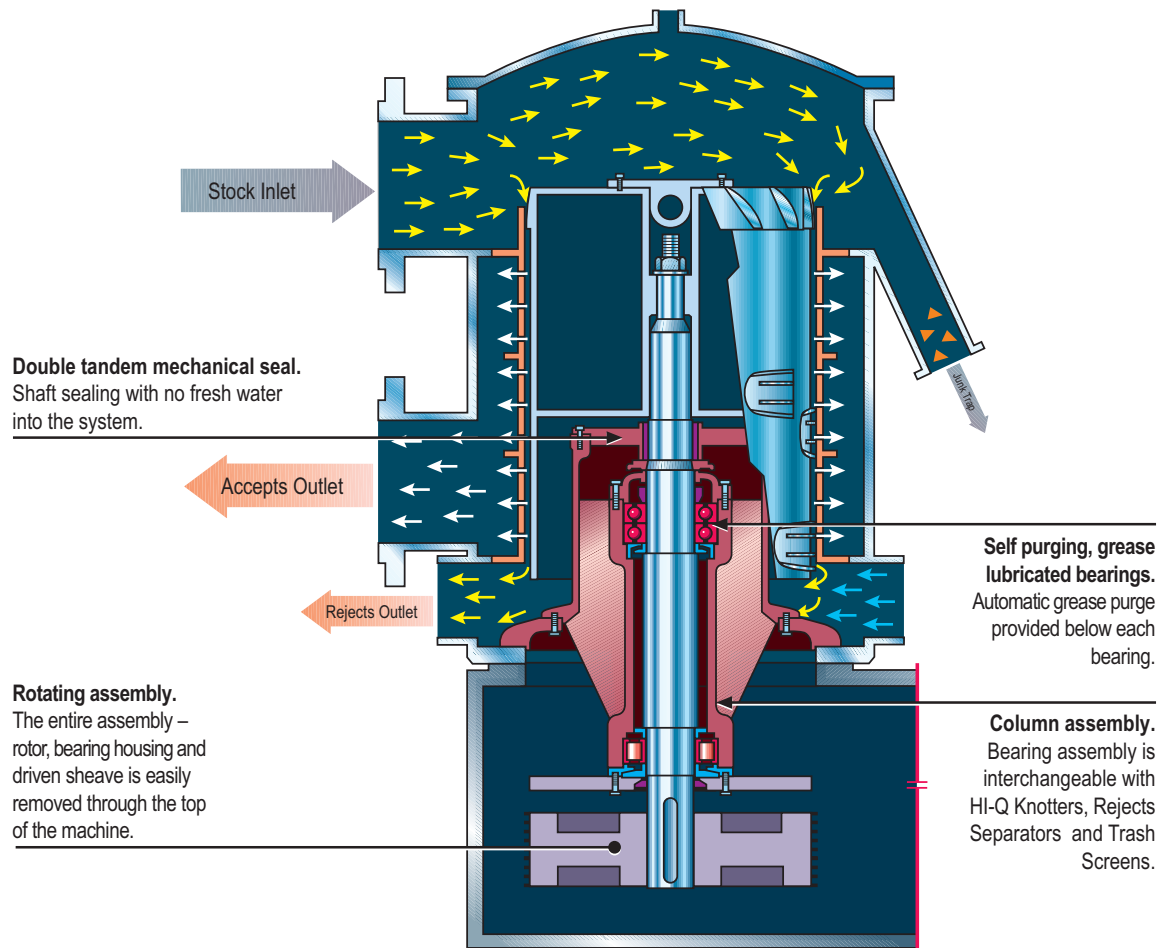

Applications

- Shive and dirt removal from all chemical, mechanical, waste paper pulp and paper making fibers.
- Fine slot screening to remove shives, dirt, vessels and plastics.
- Perforated or slotted; grooved, dimpled or smooth screenplate technology.
- Stingray Rotor and fine slot screenplate technology is available for retrofit of older model

HI-Q Fine Screens, Centrisorters and many other pressure screens.

Maintenance

- The screen rotor is mounted on a sturdy vertical shaft supported by self purging, grease lubricated, heavy duty bearings.
- Chromium hard surfacing is applied to all grooved slotted screenplates and may be optionally applied to any other screenplate.
- To minimize spare parts inventory, the bearing assembly is interchangeable with the HI-Q Knotters, Rejects Separators and Trash Screens.
