

DUFLO® Pump

Can you afford to disregard...

- lower operating and maintenance cost with the DUFLO® Impeller?
- low down time cost because there is no need for realignment after change of rotating unit?
- reduced spare part cost due to modular design?
- low installation cost due to compact design?
- lower electrical equipment costs due to internal vacuum pump?

The DUFLO Pump new generation meets all the expectations of customers for all kinds of pulp. The great advantage of the integrated vacuum pump is widely appreciated.

The well proven high efficiency is highly valued. With the use of frequency control motors, further improvement of the energy efficiency is now verified.

Mechanical features like the modular design, the installation flexibility and the well balanced DUFLO Impeller provide the technical base for the success of the DUFLO Pump.
